Tiruchirappalli, Tamil Nadu, India

PROFESSIONAL SUMMARY

Final-year B.Tech. student in Artificial Intelligence & Data Science with a strong foundation in software development, AI, and full-stack web technologies. Skilled in developing AI-powered applications and interactive web solutions, with proficiency in data structures, algorithms, and modern development frameworks. A quick learner with strong problem-solving and teamwork skills, eager to contribute to innovative technology-driven projects.

EDUCATION

B.Tech. in Artificial Intelligence and Data Science — **Tiruchirappalli, Tamil Nadu**
Saranathan College of Engineering - Autonomous — September 2023 - Present
Cumulative GPA: 8.59/10

SKILLS

Programming Languages:	Python, Java, JavaScript, SQL
Web Technologies:	React, HTML5, CSS3, Bootstrap
Backend & Frameworks:	FastAPI
AI & Generative AI:	LLMs, RAG, LangChain, LangGraph
Tools:	Git, GitHub, Power BI, VS Code

PROJECTS

ARGO – AI-Powered Web Platform for Intelligent Decision Support (SIH) — **Sep 2025**
Technologies: Django, LangChain, LangGraph, RAG, HTML, CSS, JavaScript, Bootstrap, ChromaDB

- Designed and developed responsive web interfaces using HTML, CSS, JavaScript, and Bootstrap, ensuring cross-device compatibility.
- Built and integrated an AI-powered backend using Django, enabling dynamic and intelligent content delivery.
- Implemented a Retrieval-Augmented Generation (RAG) pipeline for document-aware question answering. Integrated LangChain and LangGraph workflows to enable structured, real-time AI interactions within the web application
- Developed end-to-end API integration, handling request/response flows, vector retrieval, and AI-generated responses.

Demo: Link

Manipulation Detection AI System — **March 2026**
Technologies: FastAPI, HTML, CSS, JavaScript, LangChain, LangGraph, Supabase, Mistral-7B Instruct, Whisper**,** CLIP, Sentence Transformers (MiniLM)

- Built a **multi-modal AI system** capable of detecting manipulative content across text, image, audio, and video data.
- Developed a **Chrome extension and FastAPI backend** for real-time content analysis.
- Implemented **RAG-based memory** using **Supabase and pgvector** for contextual, personalized AI responses.
- Integrated **Mistral, Whisper, CLIP, MiniLM** models, along with an analytics dashboard for monitoring manipulative trends.

Demo: link

GitHub Repository Analyzer AI — **Oct 2026**
Technologies: Python, FastAPI, LangChain, HTML, CSS, JavaScript, GitHub REST API, Google Gemini API

- Developed a web-based application to extract and analyze GitHub profiles and repositories, displaying repository statistics such as total stars and programming language distribution.
- Implemented repository exploration and file structure extraction using the GitHub REST API to provide insights into project organization.
- Integrated AI-powered repository analysis using LangChain and Google Gemini API to generate project summaries, identify technology stacks, explain project structure, and suggest improvements.
